

Assembly Steps:

1 Screw the Leveling Feet (D) (or Casters if purchased separately) into the bottom of each Lower Poles (B) as shown. Snap the Plastic Clips (E) on the grooves of each Lower Pole at or near the bottom of the lower poles (same location on each pole). Make sure the arrow of all Plastic Clips is pointed UP.

2 Please make sure the Wire Shelf (A) is positioned correctly (as shown). Hold the shelf on its side and slide the four Lower Poles (B) through the bottom of the shelf through the holes in the corner until they fit snugly. Once the four Lower Poles are securely through the holes, set the shelf upright.

3 NOTE: The exact location of the shelves is the customer's preference. We recommend you consider what will be on the shelves and the spacing you will need before assembling the unit completely. Snap 8 Plastic Clips (E) on the pole grooves of the 4 Lower Poles. Then slide down a Wire Shelf (A) onto the plastic clips.

4 Screw Upper Poles (C) into the Lower Poles as shown.

5 Repeat step 3 to install the third and fourth shelves at the location of your choosing.

6 Once all shelves have been installed firmly push down or tap gently with a rubber mallet to ensure all shelves are securely on the Plastic Clips. Place polypropylene mats on to the shelves.
