TRAINING COURSE OUTLINE INSTRUMENT RATING - AIRPLANE

COURSE OBJECTIVES

The student will obtain the aeronautical skill and experience necessary to meet the requirements for an Airplane Category Instrument Rating.

COURSE COMPLETION STANDARDS

The student must demonstrate through flight tests and school records that the aeronautical skill and experience requirements necessary to obtain an Airplane Category Instrument Rating have been met.

TRAINING COURSE OUTLINE INSTRUMENT RATING - AIRPLANE

COURSE INTRODUCTION

Sporty's Training Course Outline for the Instrument Rating – Airplane is the syllabus portion of the Sporty's Academy 14 CFR Part 141* Approved Instrument Rating Training Course. This outline provides a logical, structured sequence that maximizes learning and meets 14 CFR Part 141 training time requirements. Training times must be increased slightly to meet 14 CFR Part 61* requirements for students training under those rules. This Training Course Outline also contains ground lessons appropriate to the Instrument Rating.

COURSE CONCEPT

The Instrument Rating course utilizes the building-block theory of learning, which recognizes that each item taught must be presented on the basis of previously learned knowledge and skills.

For optimum effectiveness, the ground lessons and viewing of the associated video segments should be completed prior to the respective flight lessons. If a considerable length of time has elapsed between the ground lesson and the associated flight, the instructor may wish to conduct a short review of essential material.

COURSE ELEMENTS

The course includes the latest FAA pilot certification requirements and a maximum of student-oriented instruction. The syllabus and support materials not only provide necessary information, but also guide the student through the course in a logical manner.

STUDENT VIDEO PREPARATION

The Sporty's Instrument Rating Training Course Outline is based on Sporty's Complete Flight Training course for the Instrument Rating DVD, Online, or App. It is important that the student view all seven video volumes in the Instrument course. For each ground and flight lesson, specific video sections are indicated for additional study which should be accomplished as part of a self-study program. Additional topics may also be assigned by the instructor. To maximize the learning benefit of the videos, the student should also review the video sections after completion of the lesson. This is particularly true of any subject areas where the student encountered difficulty.

PREFLIGHT ORIENTATION

Prior to each dual lesson, the instructor must provide the student with a thorough overview of the subject matter to be covered during the lesson. The instructor should select a quiet, private place to brief the student and explain the lesson material. It is important that the instructor define unfamiliar terms and explain the maneuvers and objectives of each lesson.

*14 CFR Part 141 and 14 CFR Part 61 refer to the appropriate parts of Title 14 of the Code of Federal Regulations. Title 14 covers aeronautics and space. The regulations in this title are often referred to as the Federal Aviation Regulations or FARs.

FLIGHT TRAINING DEVICE / AVIATION TRAINING DEVICE

Sporty's Training Course Outline for the Instrument Rating is designed to allow practice of maneuvers and procedures in the airplane only after the student has been introduced to and taught the maneuver or procedure in an approved flight training device (FTD) or approved aviation training device (ATD). FTD / ATD lessons are more effective for initial explanation, discussion, and introduction of new material. The best results are obtained when the student learns a maneuver or procedure prior to flying the airplane. Ideally the airplane should be used to practice what has been learned in the FTD or ATD. Refer to the letter of authorization for the device to determine what may count toward the time required for the Instrument Rating. When procedures and maneuvers are introduced in the airplane the instructor must explain and discuss the new material to insure that the student thoroughly understands the new material.

AIRPLANE PRACTICE

Airplane practice must be conducted so that the student obtains the maximum benefit from each flight. Each flight, where applicable, should begin with a review of previously practiced maneuvers, as deemed necessary by the instructor, before any new maneuvers are reviewed. If the airplane is not equipped for all of the tasks detailed in a particular lesson, the items that cannot be completed for this reason should be discussed. If there is a possibility that the student will use an airplane that is equipped for these tasks during the practical test, the tasks should be successfully demonstrated by the student at some point in the training.

POSTFLIGHT EVALUATION

The postflight evaluation is equally as important as the preflight orientation. During each postflight session, the student must be thoroughly debriefed. Noticeable advancement should be apparent and recommendations should be made for improvement, where appropriate. This action is a valuable instructional technique because it increases retention. The instructor must also discuss the elements of the next lesson. This prepares the student for the video assignment and will enhance the student's understanding.

LESSON TIMES

Lesson times are specified as a guide to meeting the 14 CFR Part 141 training requirements for the Instrument Rating. Under the building block concept, however, the student must achieve a specific level of proficiency before starting the next lesson. Lessons may be combined or repeated as needed based on the progress made by the student. The Course Time Allocation Table is provided for planning purposes. It is imperative that the instructor and student periodically review the student's overall progress and determine that the training requirements are consistently being met.

OPTIONAL LESSONS

There are 5 lessons that may be found at the end of this TCO which are optional substitutions for lessons 9, 10, 11, 24, & 26. These lessons include NDB / ADF concepts and may be utilized if the training aircraft is ADF equipped or when otherwise desired.

STUDENT STAGE CHECKS

Stage checks measure the student's accomplishments during each stage of training. This procedure provides close supervision of training and another opinion on the student's progress. An examination of the building-block theory of learning will show that it is extremely important for progress and proficiency to be satisfactory before the student enters a new stage of training. Therefore, the next stage should not begin until the student successfully completes the current stage. Failure to follow this progression may defeat the purpose of the stage check and lead to overall course breakdown.

GRADING

Evaluation is an essential part of the teaching process. The student must be apprised of his or her progress. All instructional flights must be graded in accordance with the following criteria.

Each pilot operation will be evaluated at the completion of each flight.

1 = EXCELLENT	The student demonstrates knowledge or skills with no procedural or mechanical errors and the flight instructor does not provide any assistance
2 = ABOVE AVERAGE	The student demonstrates knowledge or skills that exceed standards. Occasional procedural or mechanical errors are quickly recognized and corrected.
3 = AVERAGE	The student consistently demonstrates knowledge and skills that meet standards with timely recognition of procedural or mechanical errors.
4 = BELOW AVERAGE	The student demonstrates knowledge and skills with difficulty, is slow in recognizing and correcting procedural or mechanical errors.
5 = BELOW ACCEPTABLE STANDARDS	The student does not demonstrate adequate knowledge or skills, is unable to recognize and correct procedural or mechanical errors.
I = INCOMPLETE	The student has not completed the pilot operation listed.

Each lesson will be assigned an overall grade based on the following criteria.

S = SATIS- FACTORY	The content of the lesson has been completed to the standards outlined in the individual lesson Completion Standards.
U = UNSATIS- FACTORY	Indicates that all or part of the lesson content was not completed to the standards outlined in the individual lesson Completion Standards. One or more pilot operations graded as a "5" will require an overall grade of unsatisfactory.
I = INCOMPLETE	Indicates the content of the lesson was not completed, but the pilot operations covered were satisfactory. Pilot operations not completed must be indicated with an "I".

GRADING NOTES

1. When a lesson is graded unsatisfactory, only those pilot operations graded as "5" must be repeated to standards during the next lesson.
2. When a lesson is graded incomplete, the pilot operations not performed must be completed prior to attempting the pilot operations for the next lesson.
3. Use the "CRS TOTALS: (F/I/D/FS)" lines within the grading box to total the student's flight, instrument (in the airplane), ground instruction (discussion), and FTD/simulator times in the course after each lesson.

INSTRUMENT FLIGHT PATTERNS

The instrument flight patterns "A" and "B" and associated text on the following pages have been reprinted from AC 61-27C, the Instrument Flying Handbook that preceded FAA-H-8083-15. AC 61-27C is no longer available, but these patterns are still quite useful in developing a pilot's ability to control the aircraft while flying solely by reference to the instruments. Aircraft control is the primary goal of using the flight patterns; the patterns are only a teaching tool for this purpose.

The instrument flight patterns are used in Stage I of this Training Course Outline.

TSA ALIEN FLIGHT STUDENT PROGRAM RECORDS

The TSA mandated Alien Flight Student Program (AFSP) has a number of compliance and record keeping requirements. Refer to the TSA website for details. The inside front cover of this book has a place to record that you have completed the requirements. That line is there to serve as a reminder to complete the TSA mandates but does not meet the documentation requirements.

Per the TSA, an instructor may elect to use an endorsement in the Student's *and* the Instructor's logbooks to document confirmation of a Student's U.S. Citizenship (not allowed for aliens). The Instructor's copy of the record must be kept for at least 5 years. The recommended text of the endorsement is as follows:

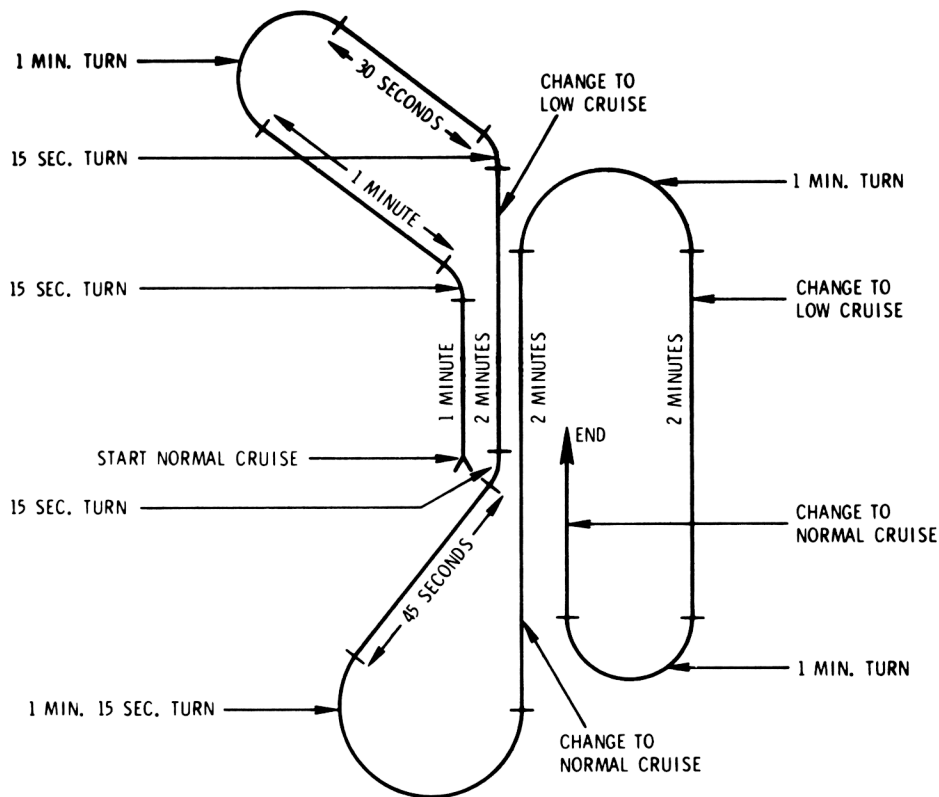

"I certify that [insert student's name] has presented me a [insert type of document presented, such as a U.S. birth certificate or U.S. passport, and the relevant control or sequential number on the document, if any] establishing that [he or she] is a U.S. citizen or national in accordance with 49 CFR 1552.3(h). [Insert date and instructor's signature and CFI number.]"

For details or clarification, refer to the TSA's website.

Pattern "A"

The purpose of both Pattern "A" and Pattern "B" is to further develop the pilot's ability to control the aircraft without deliberate thought. These patterns help prepare the student for the holding patterns and procedure turns he will fly during radio navigation. Initial practice should be on cardinal headings for simplification; however, as proficiency increases the student should be able to accomplish the patterns on any heading. The instructor may make various changes in the patterns, or, the patterns may be flown over a navigational facility, correcting for drift on each leg.

1. *Brief Student Thoroughly Prior to the Flight*
2. *Performance of Maneuver in the Aircraft*
 - a. This maneuver should be performed first with all available instruments, then on partial panel.
 - b. Start Pattern "A" and demonstrate through the first three turns, then have the student continue.
 - c. Timing should start when the clock second hand is on a cardinal point, preferably the 12 o'clock position.
 - d. The timing for this pattern is consecutive in that the time for each leg is started when control pressure is applied to recover from the preceding turn.
 - e. After recovery from turns, allow sufficient time for the compass card to stop oscillating, then note the heading and correct if necessary. An exception is the 30-second leg. If you note an error in heading here, compensate for it by lengthening or shortening the time allotted for the next turn.

- f. The turn coordinator and magnetic compass must be observed closely at all times. To correct a heading, use a timed turn (for small heading changes, use a half-standard rate turn).
- g. An efficient cross-check is required during airspeed changes so that corrections may be applied immediately.

Pattern "B"

1. *Brief Student Thoroughly Prior to the Flight*
2. *Performance of Maneuver in the Aircraft*
 - a. Do not demonstrate unless absolutely necessary.
 - b. All available instruments are used.
 - c. Roll out on headings regardless of time.
 - d. When changing airspeed in turns, *simultaneously* change bank and power, also pitch if applicable.
 - e. The descending final turn is made at an absolute rate.
 - f. The final descent is made to a minimum altitude set by the instructor, or until the time expires, whichever comes first.
 - g. The emergency pull-up is made as a normal go-around procedure, climbing to the original altitude.

Course Time Allocation Table

STAGE NO.	LESSON	TRAINING TIMES

COMBINED COURSE TOTALS			45.7		
FAA 141 REQUIREMENTS			35.0 TOTAL		30.0 TOTAL

Note: A cross-country flight of at least 250 Nautical Miles along airways or ATC directed routing with one segment of the flight consisting of at least a straight line distance of 100 Nautical Miles between airports is required for Part 141. The flight must involve an instrument approach at each airport and involve 3 different kinds of approaches with the use of navigation systems. Part 61 requires a similar cross-country flight but does not require the 100 miles distance for one segment of the flight.

STAGE I

STAGE OBJECTIVE:

During this stage, the student will learn precise airplane attitude control solely by reference to the airplane instruments.

STAGE COMPLETION STANDARDS:

At the completion of this stage the student will demonstrate precise airplane attitude control by instrument reference only. This will include the use of full panel and partial panel instrument reference. Tolerances for all maneuvers will be in accordance with the Instrument Rating Practical Test Standard.

Lesson Introduction

- _____ Attitude Indicator
- _____ Gyro Driven Heading Indicator
- _____ Turn Coordinator / Turn & Bank Indicator
- _____ Slip & Skid Indicator
- _____ Gyroscopic Instrument Errors
- _____ Glass Panel Flight Instrument Displays

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a thorough knowledge of the pitot-static and gyroscopic instruments.

ADDITIONAL STUDY:

FAA-H-8083-15-IFH - Instrument Flying Handbook
 Instrument Rating Airman Certification Standards (Refer to Section 1 of the ACS Study Guide, which accompanies Sporty's *Complete Flight Training Course* for the Instrument Rating.)
 Sporty's *Complete Flight Training Course* for the Instrument Rating - Video Vol 1: Segments 1-12 (DVD 1-13)

Note on Video Segment Numbering: The DVDs, online course, and iOS app for the course contain the same video content at the time of production. The numbering is slightly different on the DVDs due to Introductory segment of each DVD being labeled as a separate Segment 1. This introductory material is included with the first lesson segment on the online and iOS versions thus causing the segment numbers to be different by one.

LESSON OBJECTIVE:

During this lesson, the instructor will introduce VOR procedures in an FTD or ATD.

CONTENT:

Lesson Introduction

- _____ VOR Tuning and Identifying
- _____ VOR Orientation, Position, and Station Passage
- _____ VOR Radial Intercepting and Tracking Procedures / Wind Correction Techniques

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a basic knowledge of VOR procedures. The student will maintain or roll out on assigned headings $\pm 10^\circ$, maintain or level off at assigned altitudes $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$.

ADDITIONAL STUDY:

FLIGHT TIME: (1.2) _____		DISCUSSION: (0.4) _____	
INSTRUMENT: (1.0) _____		CRS TOTALS: (F/I/D/FS) ____ / ____ / ____ / ____	

LESSON OBJECTIVE:

During this lesson, the instructor will introduce the student to VOR procedures in the training aircraft.

CONTENT:

Lesson Introduction

- _____ VOR Tuning and Identifying
- _____ VOR Orientation, Position, and Station Passage
- _____ VOR Radial Intercepting and Tracking Procedures / Wind Correction Techniques
- _____ Instrument Flight Patterns while Tracking To or From a VOR on a Specified Radial

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a basic knowledge of VOR procedures. The student will maintain or roll out on assigned headings $\pm 10^\circ$, maintain or level off at assigned altitudes $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$. While tracking a specified VOR course, the student will apply proper correction to maintain the course, allowing no more than 3/4 scale deviation on the CDI.

LESSON OBJECTIVE:

During this lesson, the instructor will discuss the principles of GPS operation.

CONTENT:

Lesson Introduction

- _____ GPS Principles of Operation
- _____ Receiver Autonomous Integrity Monitoring (RAIM)
- _____ GPS Errors & Irregularities
- _____ Wide Area Augmentation System (WAAS)
- _____ GPS Modes of Operation
- _____ GPS Use Under IFR
- _____ GPS CDI Scaling (En Route, Terminal, & Approach)
- _____ GPS Waypoints
- _____ GPS Direct-To Operations
- _____ GPS Flight Plan Operations

Lesson Introduction

- _____ GPS Nearest Functions
- _____ Substitution of GPS for Other Navigation Radios Under IFR
- _____ Orientation, Position, and Waypoint Passage / Sequencing
- _____ GPS Course Intercepting and Tracking Procedures / Wind Correction Techniques
- _____ Computer Based GPS Procedures
- _____ Simulator (from Appropriate GPS Manufacturer)
- _____ Installed GPS Specific Procedures

COMPLETION STANDARDS:

At the completion of this lesson, the student will have knowledge of GPS operation.

ADDITIONAL STUDY:

- FAA-H-8083-15-IFH
- AIM
- Appropriate Manuals for the Installed GPS
- Instrument Rating Airman Certification Standards

INSTRUCTOR # _____		INSTRUCTOR SIGNATURE _____	
FLIGHT TIME: (1.8) _____		DISCUSSION: (0.4) _____	
INSTRUMENT: (1.6) _____		CRS TOTALS: (F/I/D/FS) ____ / ____ / ____ / ____	

LESSON OBJECTIVE:

During this lesson, the instructor will review VOR, GPS, and autopilot procedures, steep turns by reference to instruments, instrument flight patterns, and partial panel instrument flight with the student in the training aircraft.

CONTENT:

Lesson Review

- _____ Steep Turns
- _____ VOR Procedures
- _____ GPS Procedures
- _____ Autopilot Procedures

Lesson Review

- _____ Partial Panel Instrument Flight
- _____ Instrument Flight Patterns with Autopilot
- _____ Instrument Flight Patterns while Tracking VOR Radial (without Autopilot)

COMPLETION STANDARDS:

At the completion of this lesson, the student will be able to perform 45° bank steep turns (180° or 360°) by reference to instruments and have a working knowledge of VOR, GPS, and autopilot procedures. The student will maintain headings ±10°, maintain altitudes ±100', maintain airspeeds ±10 knots, and maintain turning angles of bank ±5°. While tracking a specified course, the student will apply proper correction to maintain the course, allowing no more than 3/4 scale deviation on the CDI.

- Vol 1: Review Segments as Needed
- Vol 6: Segments 4 & 12 (DVD 5 & 13)

Notes:

PRE-STAGE CHECK – TIME SUMMARY

This page is intended to be used by the student's flight instructor to summarize the times accumulated through this course of instruction and determine that the times are sufficient for the stage requirements. The check instructor should verify that these times are acceptable for completion of the stage.

Part 141 Note: The instrument time in an approved FTD or AATD used to meet the minimum requirements of Part 141 may not exceed 40% of the total flight training hours required for the course of instruction. Training time in an approved BATD cannot exceed 25% of the total flight training hours required for the course of instruction. The limit is raised to 50% for an approved full flight simulator or a combination of a simulator, an FTD, an AATD, and a BATD (FTD, AATD & BATD time limits still apply).

Lesson Review

FLIGHT

- _____ Instrument Takeoff
- _____ Steep Turns
- _____ Recovery from Unusual Flight Attitudes
- _____ VOR Procedures
- _____ GPS Procedures
- _____ Autopilot Procedures
- _____ Partial Panel Instrument Flight

COMPLETION STANDARDS:

At the completion of this lesson, the student will have proficiency in basic attitude instrument flight as well as VOR, GPS, and autopilot procedures. The student will maintain headings $\pm 10^\circ$, maintain altitudes $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$. While tracking a specified course, the student will apply proper correction to maintain the course, allowing no more than 3/4 scale deviation on the CDI.

ADDITIONAL STUDY:

- FAA-H-8083-15-IFH
- Instrument Rating Airman Certification Standards
- Vol 1: Review Segments as Needed
- Vol 6: Review Segments as Needed

Notes:

STAGE II

STAGE OBJECTIVE:

During this stage, the student will learn and refine basic radio navigation procedures, including the intercepting and tracking of courses through the use of VORs, Localizers, and other navigation systems. The student will also learn to perform instrument approaches.

STAGE COMPLETION STANDARDS:

The student will demonstrate positional awareness and the ability to accurately navigate the aircraft by reference to navigation systems. At the completion of this stage the student will be able to perform local instrument flight operations to the current Instrument Rating Airman Certification Standards.

DISCUSSION: (1.2) _____	
CRS TOTALS: (F/I/D/FS) _____ / _____ / _____ / _____	

LESSON OBJECTIVE:

During this lesson, the instructor will introduce the student to holding and the associated procedures along with IFR clearances.

CONTENT:

Lesson Introduction

- _____ Holding
- _____ Purpose of Holding
- _____ Holding Airspace
- _____ Legs of a Holding Pattern
- _____ Standard vs. Nonstandard Holding Patterns
- _____ Maximum Holding Speeds
- _____ Holding Entry Procedures
- _____ Holding Wind Correction Techniques
- _____ Holding Clearances
- _____ Fix Crossing Check (5T's)
- _____ Timing
- _____ Use of DME while Holding

Lesson Introduction

- _____ Use of GPS while Holding
- _____ Intersection Holding
- _____ Communication Requirements
- _____ Pilot Responsibilities
- _____ ATC Responsibilities
- _____ Elements of an IFR Clearance
- _____ Practical Methods for Copying an IFR Clearance
- _____ Datalink IFR Clearances
- _____ IFR Clearance Compliance, Limits, and Void Times

COMPLETION STANDARDS:

At the completion of this lesson, the student will have an understanding of holding procedures and IFR clearances.

INSTRUCTOR # _____		INSTRUCTOR SIGNATURE _____	
FTD/ATD/SIM: (1.5) _____		DISCUSSION: (0.4) _____	
CRS TOTALS: (F/I/D/FS) _____ / _____ / _____ / _____			

LESSON OBJECTIVE:

During this lesson, the instructor will introduce the student to nonprecision approaches and missed approach procedures. Holding procedures will be reviewed.

CONTENT:

Lesson Introduction

- _____ Departure Vectors to Filed Route
- _____ Climb Via SID Operations
- _____ IFR Navigation
- _____ Approach Setup and Briefing
- _____ Descend Via STAR Operations
- _____ VOR Approach
- _____ GPS Approach (LNAV)
- _____ Missed Approach Procedures
- _____ Landing from an Approach

Lesson Review

- _____ Copying / Understanding IFR Clearances
- _____ ATC Communications
- _____ Holding Pattern Entries
- _____ Holding Patterns (VOR/GPS)

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a basic understanding of holding procedures, nonprecision approach procedures, and missed approach procedures. The student will maintain headings $\pm 10^\circ$, maintain altitudes, other than flight at MDA, $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$. During nonprecision approaches the student will maintain the MDA, when reached, +200/-0 feet to the MAP and allow no more than a three-quarter-scale deflection of the CDI while on the final approach segment.

INSTRUCTOR # _____		INSTRUCTOR SIGNATURE _____	
FLIGHT TIME: (2.0) _____		DISCUSSION: (0.4) _____	
INSTRUMENT: (1.8) _____		CRS TOTALS: (F/I/D/FS) ____ / ____ / ____ / ____	

LESSON OBJECTIVE:

During this lesson, the instructor will introduce the student to ILS, back course, and APV approach procedures in the training aircraft. Holding, VOR and GPS approaches, and missed approach procedures will be reviewed.

CONTENT:

Lesson Introduction

- _____ ILS Approach
- _____ Back Course Approach
- _____ APV Approach (LPV or LNAV/VNAV)

Lesson Review

- _____ Filing an IFR Flight Plan
- _____ Copying / Understanding IFR Clearances
- _____ ATC Communications
- _____ IFR Navigation
- _____ Holding Procedures
- _____ Approach Setup and Brief
- _____ VOR Approach
- _____ GPS Approach (LNAV)
- _____ Missed Approach Procedures

COMPLETION STANDARDS:

At the completion of this lesson, the student will be able to navigate, hold en route, and perform ILS, VOR, and GPS approaches with minimal instructor assistance. The student should also be able to perform ATC communications with minimal instructor assistance. The student will maintain headings $\pm 10^\circ$, maintain altitudes, other than flight at MDA or during the final approach segment of a precision approach, $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$. During nonprecision approaches the student will maintain the MDA, when reached, +200/-0 feet to the MAP and allow no more than a three-quarter-scale deflection of the CDI while on the final approach segment. During precision and APV approaches the student will avoid descents below the DA/DH before initiating a missed approach procedure or transitioning to a normal landing approach and allow no more than a three-quarter-scale deflection of the CDI or glideslope while on the final approach segment.

Notes:

PRE-STAGE CHECK – TIME SUMMARY

This page is intended to be used by the student’s flight instructor to summarize the times accumulated through this course of instruction and determine that the times are sufficient for the stage requirements. The check instructor should verify that these times are acceptable for completion of the stage.

Part 141 Note: The instrument time in an approved FTD or AATD used to meet the minimum requirements of Part 141 may not exceed 40% of the total flight training hours required for the course of instruction. Training time in an approved BATD cannot exceed 25% of the total flight training hours required for the course of instruction. The limit is raised to 50% for an approved full flight simulator or a combination of a simulator, an FTD, an AATD, and a BATD (FTD, AATD & BATD time limits still apply).

The objective of this lesson is to evaluate the student's comprehension of the material presented in the Instrument Pilot Certification ground lessons.

CONTENT:

Lesson Review

- _____ Instrument Pilot Knowledge Test
- _____ Weather Information
- _____ Cross-Country Flight Planning
- _____ Aircraft Systems Related to IFR Flight

Lesson Review

- _____ Aircraft Flight / Navigation Equipment
- _____ Instrument Flight Deck Check
- _____ FARs Related to IFR Flight & Pilot Qualifications

COMPLETION STANDARDS:

In order to complete the ground portion of the Instrument Pilot Certification Course, the student must score at least a 70% on the Instrument Pilot Knowledge Test. The student must have instrument pilot level knowledge of the items listed for review.

Notes:

**STAGE III
LESSON 47
DUAL - AIRCRAFT
END OF STAGE REVIEW**

DATE _____ ACFT/FTD ID _____ GRADE (Circle One) S U I
STUDENT NAME _____ STUDENT SIGNATURE _____
INSTRUCTOR # _____ INSTRUCTOR SIGNATURE _____
FLIGHT TIME: (2.0) _____ DISCUSSION: (0.4) _____
INSTRUMENT: (1.8) _____ CRS TOTALS: (F/I/D/FS) _____ / _____ / _____ / _____

LESSON OBJECTIVE:

During this lesson, the instructor will review instrument flight procedures with the student in preparation for the final stage check.

CONTENT:

Lesson Review

- _____ Instrument Flight Deck Check
- _____ Compliance with ATC Clearances
- _____ Communications
- _____ Holding Procedures
- _____ Instrument Flight
- _____ Partial Panel Instrument Flight
- _____ Recovery from Unusual Attitudes
- _____ Intercepting / Tracking Navigation Systems
- _____ Departure, En route and Arrival Operations
- _____ Nonprecision Approach - Full Approach
- _____ Nonprecision Approach - Vectored
- _____ Nonprecision Approach with an Autopilot

Lesson Review

- _____ Nonprecision Approach with Loss of Primary Flight Instrument Indicators
- _____ APV Approach
- _____ Precision Approach
- _____ Missed Approach Procedures
- _____ Missed Approach Procedures with an Autopilot
- _____ Circling Approach
- _____ Landing from Straight-In / Circling Approaches
- _____ Loss of Communications
- _____ Checking Instruments and Equipment

COMPLETION STANDARDS:

The student shall perform all maneuvers to the standards established by the Instrument Rating Airman Certification Standards.

ADDITIONAL STUDY:

FAA-H-8083-15-IFH
Instrument Rating Airman Certification Standards
Vol 7: Segments 1-13 (DVD 1-14)

Note: The Nonprecision Approach with Loss of Primary Flight Instrument Indicators and the Nonprecision Approach with an Autopilot can be combined with the full and vectored approaches. Just as the practical test standards require, the student should complete at least 2 nonprecision approaches and 1 precision approach during this review session. At least 1 nonprecision approach should include a procedure turn or a full TAA transition. LPV minimums with a DA greater than 300 feet HAT may be used as a nonprecision approach; LPV minimums can be used to demonstrate precision approach proficiency if the DA is equal to or less than 300 feet HAT. While this review flight can be flown as a practice checkride, it is important to ensure that the student is fully prepared for any type of approach that the airplane is capable of flying prior to the checkride thus additional approaches may be appropriate.

Notes:

PRE-STAGE CHECK – TIME SUMMARY

This page is intended to be used by the student's flight instructor to summarize the times accumulated through this course of instruction and determine that the times are sufficient for the stage requirements. The check instructor should verify that these times are acceptable for completion of the stage.

Part 141 Note: The instrument time in an approved FTD or AATD used to meet the minimum requirements of Part 141 may not exceed 40% of the total flight training hours required for the course of instruction. Training time in an approved BATD cannot exceed 25% of the total flight training hours required for the course of instruction. The limit is raised to 50% for an approved full flight simulator or a combination of a simulator, an FTD, an AATD, and a BATD (FTD, AATD & BATD time limits still apply).

STAGE I
LESSON Optional 9a
DUAL - GROUND
NDB FUNDAMENTALS

DATE _____	GRADE (Circle One) S U I
STUDENT NAME _____	STUDENT SIGNATURE _____
INSTRUCTOR # _____	INSTRUCTOR SIGNATURE _____
DISCUSSION: (1.2) _____	
CRS TOTALS: (F/I/D/FS) ____ / ____ / ____ / ____	

LESSON OBJECTIVE:

During this lesson, the instructor will discuss NDB fundamentals with the student. This lesson is considered optional and is not considered a part of the 141 required times. It can be taught at the discretion of the flight instructor if the training aircraft is equipped with an ADF.

CONTENT:

Lesson Introduction

- _____ NDB Principles of Operation
- _____ NDB Transmitter
- _____ ADF
- _____ Types of NDBs & Service Volumes
- _____ NDB Errors & Irregularities
- _____ NDB Tuning, Identifying, and Monitoring

Lesson Introduction

- _____ NDB Orientation, Position and Station Passage
- _____ Intercepting NDB Bearings
- _____ Tracking NDB Bearings / Wind Correction Techniques

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a thorough knowledge of the NDB and its operating principles. The student will also be able to accurately describe the proper techniques for orientation, intercepting, and tracking an NDB bearing.

DUAL - FTD / ATD

DATE _____	ACFT/FTD ID _____	GRADE (Circle One) S U I	
STUDENT NAME _____		STUDENT SIGNATURE _____	
INSTRUCTOR # _____		INSTRUCTOR SIGNATURE _____	
FTD/ATD/SIM: (1.5) _____		DISCUSSION: (0.4) _____	
CRS TOTALS: (F/I/D/FS) _____ / _____ / _____ / _____			

LESSON OBJECTIVE:

During this lesson, the instructor will introduce NDB procedures in an FTD or ATD. This lesson is considered optional and is not considered a part of the 141 required times. It can be taught at the discretion of the flight instructor if the training aircraft is equipped with an ADF.

CONTENT:

Lesson Introduction

- _____ NDB Tuning, Identifying, and Monitoring
- _____ NDB Orientation, Position, and Station Passage
- _____ NDB Intercepting and Tracking Procedures / Wind Correction Techniques

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a basic knowledge of NDB procedures. The student will maintain or roll out on assigned headings $\pm 10^\circ$, maintain or level off at assigned altitudes $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$.

STAGE II
LESSON Optional 24a
DUAL - FTD / ATD

DATE _____	ACFT/FTD ID _____	GRADE (Circle One) S U I	
STUDENT NAME _____		STUDENT SIGNATURE _____	
INSTRUCTOR # _____		INSTRUCTOR SIGNATURE _____	
FTD/SIM: (1.5) _____		DISCUSSION: (0.4) _____	
CRS TOTALS: (F/I/D/FS) _____ / _____ / _____ / _____			

LESSON OBJECTIVE:

During this lesson, the instructor will introduce the student to nonprecision approaches and missed approach procedures. Holding procedures will be reviewed. This lesson is considered optional and is not considered a part of the 141 required times. It can be taught at the discretion of the flight instructor as a substitute for Lesson 24 if the training aircraft is equipped with an ADF.

CONTENT:

Lesson Introduction

- _____ Departure Vectors to Filed Route
- _____ Climb Via SID Operations
- _____ IFR Navigation
- _____ Approach Setup and Briefing
- _____ Descend Via STAR Operations
- _____ VOR Approach
- _____ NDB Approach
- _____ GPS Approach (LNAV)
- _____ Missed Approach Procedures
- _____ Landing from an Approach

Lesson Review

- _____ Copying / Understanding IFR Clearances
- _____ ATC Communications
- _____ Holding Pattern Entries
- _____ Holding Patterns (VOR/NDB/GPS)

COMPLETION STANDARDS:

At the completion of this lesson, the student will have a basic understanding of holding procedures, nonprecision approach procedures, and missed approach procedures. The student will maintain headings $\pm 10^\circ$, maintain altitudes, other than flight at MDA, $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$. During nonprecision approaches the student will maintain the MDA, when reached, +200/-0 feet to the MAP and allow no more than a three-quarter-scale deflection of the CDI while on the final approach segment.

REQUIRED STUDY:

- FAA-H-8261-1-IPH
- FAA-H-8083-15-IFH
- Instrument Rating Practical Test Standards

- Vol 3: Segments 8-13 (DVD 9-14)
- Vol 4: Review Segments 1-7 (DVD 1-8) as Needed
- Vol 7: Segment 11 (DVD 12)

Notes:

STAGE II
LESSON Optional 26a
DUAL - AIRCRAFT

DATE _____	ACFT/FTD ID _____	GRADE (Circle One) S U I	
STUDENT NAME _____		STUDENT SIGNATURE _____	
INSTRUCTOR # _____		INSTRUCTOR SIGNATURE _____	
FLIGHT TIME: (1.8) _____		DISCUSSION: (0.4) _____	
INSTRUMENT: (1.6) _____		CRS TOTALS: (F/I/D/FS) _____ / _____ / _____ / _____	

LESSON OBJECTIVE:

During this lesson, the instructor will review IFR navigation, ATC communication procedures, obtaining IFR clearances, performing an approach brief, and executing nonprecision instrument approaches with the student in the training aircraft. This lesson is considered optional and is not considered a part of the 141 required times. It can be taught at the discretion of the flight instructor as a substitute for Lesson 26 if the training aircraft is equipped with an ADF.

CONTENT:

Lesson Introduction

- _____ Filing an IFR Flight Plan
- _____ Copying / Understanding IFR Clearances
- _____ ATC Communications
- _____ Departure Vectors to Filed Route or Pilot Nav to Filed Route
- _____ Climb Via SID Operations
- _____ IFR Navigation

Lesson Introduction

- _____ Holding Procedures
- _____ Descend Via STAR Operations
- _____ Approach Setup and Briefing
- _____ VOR Approach
- _____ NDB Approach
- _____ GPS Approach (LNAV)
- _____ Missed Approach Procedures

COMPLETION STANDARDS:

At the completion of this lesson, the student will be able to navigate, hold en route, and perform VOR, NDB, and GPS approaches with minimal instructor assistance. The student should also be able to perform ATC communications with minimal instructor assistance. The student will maintain headings $\pm 10^\circ$, maintain altitudes, other than flight at MDA or during the final approach segment of a precision approach, $\pm 100'$, maintain airspeeds ± 10 knots, and maintain turning angles of bank $\pm 5^\circ$. During nonprecision approaches the student will maintain the MDA, when reached, $+200/-0$ feet to the MAP and allow no more than a three-quarter-scale deflection of the CDI while on the final approach segment.
